

## PROFLEX AIRE – Duct Wrap

### Model: PA-DUCTWRAP

**PA-DUCTWRAP** is combination of our Class “O” **PA-FIBERGLASS** and a double layer aluminium foil paper with glue.

This is suitable for a wide range of application such as the external ducting insulation of air-conditioning ductwork, acoustic enclosure in the generator room, area to prevent penetration of vapour barrier and metal roof insulation.

In the market, aluminium foil paper and fiberglass are selling separately. The user has to do the manual assembly work on their factory or on site before they can do the insulation work. However, the location required must be clean and big enough to lay the foil paper to do the manual assembly work and its is very hard to find a suitable place to the assembly work on site due to the site conditions.

Thus, our **PA-DUCTWRAP** is best solution for all users where they can directly do all the insulation work directly without having problem on the manual assembly work and the site condition

#### Standard Packaging:

Size	Standard Packing
25 mm 32kg/m <sup>3</sup>	1.2m wide x 15m long
50 mm 32kg/m <sup>3</sup>	1.2m wide x 7.5m long

#### Product Benefit:

- Ease to Install
- Light weight
- Space Saving
  - Space to do the manual site assembly is no longer a concern.
  - Ease for storage
- Time Saving
  - Can direct use to the insulation work on site
- Cost Saving
  - No need to waste time to do the assembly work
- Reduce Condensation
- Reduce wastage
- Non-Combustible
